Automation for Awnings, Sunscreens and External Blinds

Summer Comfort / Health and Well-Being

The sun protection provided by awnings, sunscreens and external blinds is a key factor for health and well-being in our daily lives. Somfy motor and control systems enhance our well-being by adding convenience, thermal comfort and environmental efficiency.

By choosing a Somfy automated awning, sunscreen or external blind you maximise the functionality of your product and gain a much desired flexibility that is simply not possible with a manual system.

Benefits of a Somfy Automated Awning, Sunscreen or External Blind

Convenience

With the simple touch of a button you can move your awning, sunscreen or blind to whatever position you like. Forget struggling to manually wind up heavy awnings and blinds – with a Somfy system it's comfortable, easy and convenient.

Energy Efficiency

Reduce your energy usage by controlling the amount of heat and light entering your home. Keep your home cool in summer by reflecting the harsh heat of the sun but allow the sun in during winter to enjoy natural warmth and light.

Longer Lifespan

Somfy's smooth and controlled operation of awnings, blinds and sunscreens ensures both maximum functionality and a longer lifespan of the product. Manual operation can damage blinds and awnings through excessive force or improper use.

Quiet and Discreet

Somfy's world leading motors are fully concealed within the awning or sunscreen. With the simple press of the remote control you will enjoy the ambience and impress your guests with a quiet and sophisticated automated sun protection system.

Warranty

Somfy provides a 5 year warranty on all products. Somfy's extensive quality testing procedures ensure all motors, controls and sensors conform to national and international safety and electrical standards.

Somfy... A Sense for Motion

As a world leader in automation systems, Somfy offer a range of control solutions to suit your needs. Somfy's unique and stylish range of remote controls provides users with the ultimate in convenience – all at the touch of a button. In conjunction with the broad range of Somfy sensors, you have the ability to create energy efficient, convenient environments to improve the well-being of occupants in all living spaces.

Remote Controls

Somfy remote controls come in a broad range of colours and styles to suit any décor. Ask your Somfy retailer for the complete range.

Silver remote

Patio remote

Lounge remote

Mod/Var remote

Revolutionary scroll wheel – specific for precise adjustment of venetian blind slats. Perfect for managing the level of heat and light entering a room.

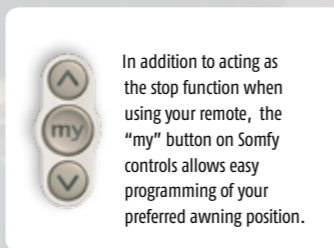

16 Channel remote

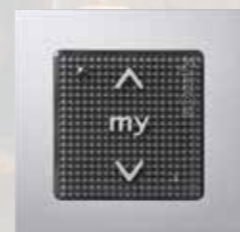

6 Channel remote with timer

Wall mounted remote

In addition to acting as the stop function when using your remote, the "my" button on Somfy controls allows easy programming of your preferred awning position.

Smoove RTS wall mounted control*

*Choice of modules and frames: modules available in 3 finishes, frames available in 7 finishes

Sensors & Timers

Thermal Comfort

Automated operation of awnings, sunscreens or external blinds via Somfy sensors and timers provides an optimum light and heat exchange between indoors and outdoors – without the need for occupant intervention. This ensures the temperature and visual comfort levels inside the home remain pleasant in all seasons, delivering a consistent living environment for maximum occupant comfort and well-being.

Eolis 3D Wirefree RTS Motion Sensor

This simple to install wirefree sensor fits neatly into the front bar of a folding arm awning. It will retract the folding arm awning based on the vibration / movement of the awning front bar – offering protection in high winds.

Sunis Wirefree RTS Sun Sensor

Using an inbuilt solar cell, this highly efficient wirefree sensor is unobtrusive and easy to install. It will extend an awning, sunscreen or external blind based on preset light levels – offering thermal comfort through smart automated operation of your sun protection system.

Soliris Sun and Wind Sensor

Somfy's Soliris sun and wind sensor is available in a wired technology or an RTS radio solution. This sensor provides a smart functionality of the awning, sunscreen or external blind without any need for your intervention.

Rain Sensor

Automatically retracts an awning or closes a roof in the event of rain.

Telis 6 chronis

Allows programming of up to 6 timed events per day, plus the benefits of a 6 channel Somfy remote.

Environmental efficiency and occupant comfort

Automated awnings and external sunscreen solutions provide a distinct advantage in controlling the amount of heat and light entering a home. By reflecting a large amount of shortwave solar radiation before it reaches the glass in windows, the impact from the build up of heat and light energy within the home is significantly reduced – effectively improving the environmental efficiency and comfort within the home.

Home Automation Systems

Somfy motor and control systems are compatible with all Home and Building Automation Systems. Ask your Somfy retailer for the best solution to suit your needs.

Touch Panel

Centrally control all your Somfy automated products with this elegant touch panel display.

Radio Technology Somfy®

Radio Technology Somfy (RTS) is Somfy's patented control protocol for the operation of radio motors. With a range of 200 metres in open space or up to 20 metres through two reinforced concrete walls, Somfy RTS motors and controls are the ideal solution for automation within your home.

Somfy contributes to improving well-being and harmony in all living spaces.
